**Amendments to the Specification:**

Please replace the title beginning at page 1, line 1, with the following rewritten title:

WINDOW FRAME ELEMENT PRODUCED BY INJECTION

Please add the following new headers before the paragraph beginning on page 1, line 3:

BACKGROUND OF THE INVENTION

*Field of the Invention*

Please add the following new header before the paragraph beginning on page 1, line 13:

*Background Description*

Please add the following new header before the paragraph beginning on page 2, line 10:

SUMMARY OF THE INVENTION

Please add the following new header before the paragraph beginning on page 3, line 32:

BRIEF DESCRIPTION OF THE DRAWINGS

Please add the following new header before the paragraph beginning on page 4, line 17:

2562-022 PCT/US-1

DETAILED DESCRIPTION OF A PREFERRED  
EMBODIMENT OF THE INVENTION

Please replace the header beginning at page 7, line 1, with the following rewritten header:

PATENT CLAIMS

Please replace the header beginning at page 9, line 1, with the following rewritten header:

ABSTRACT

Please replace the paragraph beginning at page 3, line 10, with the following rewritten paragraph:

In order to facilitate the demolding of the casting mold parts, it is advantageous if the sections that are arranged in an alternating manner have narrow side edges which are aligned with each other on a straight line, the narrow side edges preferably bounding a conical intermediate space (16) between two sections of a limb. This makes it possible to design the separating plan, which is of meandering design, with conical meanders which permit easy demolding. In this case, the angle of conicity is preferably between 10° and 45°, more preferably between 30° and 40° and particularly preferably 35°± 2°.
